DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-6, 8-11 and 20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-12 of U.S. Patent No. 6,426,512. Although the conflicting claims are not identical, they are not patentably distinct from each other because the pending claims are generic to the patented claims, and thus encompass the same subject matter.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5, 8, 11 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka et al. 9-51139.

Figures 1-3 of Tanaka et al. teach each of the claim elements, with sapphire substrate at 1, titanium nitride at 2, and GaN at 5 (which overlaps layer 2). 10 is an electrode. Process limitations would not serve to distinguish in these device claims, because distinct structure has not been shown to arise from the recited process steps. See *In re Thorpe*, 227 USPQ 964 (Fed. Cir. 1985).

Claims 6 and 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka et al. in view of Kimura.

Kimura teaches at column 3, lines 5-10 to form a GaN based device on (111) MgAl_2O_4 . It would have been obvious to form the Tanaka device on the known substrate material, in order to take advantage of the epitaxial growth arising from the crystal face as taught. Buffer layers such as Kimura 102 would also have been obvious, to enhance crystal perfection in overgrown layers, as is well-known in the art.
